Volunteer in road safety and repair

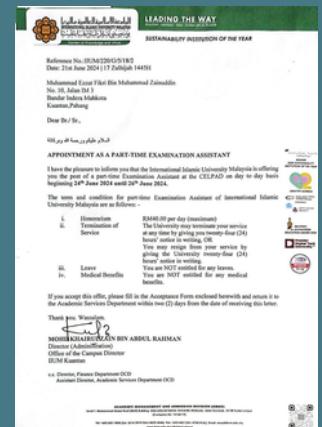

Resilience and Successful Story

Adaptive using Tools: Despite using Unreal Engine and Unity, I challenged myself to use Godot as a platform to create an educational game, despite lacking knowledge and skills.

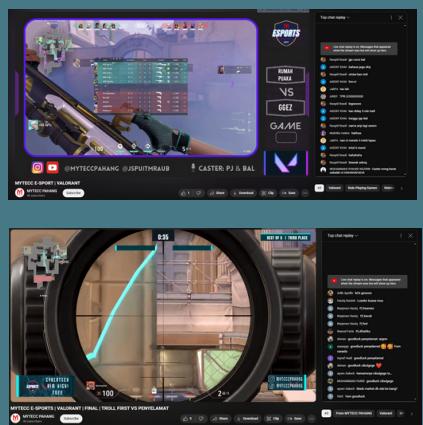

Strategic Time Management: I managed time to develop the game excellently even though the final year was the busiest time for final year students, and I managed to complete it on time in 3 months.

Ability to bounce back: I overcame the setback of being stuck in the in-game process to create a pause menu due to lack of knowledge. I found the problem cause and tried different solutions until it could be done.
